DESIGN CONCEPT 02 / PROFILE DRAFT

A clear focus. A connected business.

Techno Mining is a mining company focused on coal and chrome. These two minerals define the business and the enquiries it welcomes, from discussions about mining activities to project-specific commercial opportunities.

Our business

A clear understanding of the mineral and the intended opportunity is the starting point for a useful discussion. Coal and chrome enquiries should be treated individually, with the relevant operation, product information and commercial requirements established for each case.

Our perspective

A coal or chrome opportunity needs to be understood in the context of the particular operation and commercial brief. Relevant product information, volumes and proposed arrangements form the basis for a more detailed discussion with the company.

The capability behind the name.

01 Coal mining

A core part of our business

Coal mining is one of Techno Mining's two stated activities. An enquiry should identify the nature of the opportunity and the information needed, whether it concerns an operation, a product requirement or a proposed commercial discussion. Product and operational details belong to the specific enquiry.

- + Purpose of the enquiry
 - + Relevant operation or opportunity
 - + Required product information
-

02 Chrome mining

A distinct mineral focus

Chrome mining forms the second part of the business. A useful brief explains the proposed opportunity, the required material information and the intended timing. Any specification, quantity or availability discussed must relate to the particular transaction or operation.

- + Opportunity and intended scope
 - + Material or project information
 - + Timing and commercial requirements
-

03 Commercial discussions

Start with a clearly defined brief

For either mineral, the next step is a direct discussion with the company. Supporting information can then be identified and the scope developed before commitments are made. Mining rights, operational permissions, production capacity and available grades are project-specific matters for confirmation.

- + Named business and contact
 - + Supporting requirements
 - + Proposed next steps
-

A better brief. A clearer next step.

Start the conversation with the mineral, the opportunity and the information you need.

**01 MINERAL**

Specify coal or chrome.

02 ENQUIRY TYPE

Describe the mining, project or commercial opportunity.

03 PRODUCT INFORMATION

State the specification or analysis required.

04 QUANTITY

Indicate the volume being discussed, where relevant.

05 TIMING

Include your required dates or project milestones.

06 SUPPORTING DOCUMENTS

Identify the documents needed for your assessment.

This guide helps structure the enquiry. Specifications, availability, pricing and the responsibilities of each party must be confirmed in the documents for the particular opportunity.

Four businesses. Distinct capabilities.

The Technobulk identity brings these businesses together while keeping the focus of each company clear.

Exports, storage and handling at Durban harbour.

A mining business focused on coal and chrome.

Warehousing at Durban harbour.

G5 and G7 materials in Richards Bay.
