DESIGN CONCEPT 02 / PROFILE DRAFT

A clear focus. A connected business.

Techno Mix provides warehousing at Durban harbour. Its service focus is straightforward: a dedicated point of contact for customers looking to discuss their cargo storage requirements in the harbour area.

AI-generated illustrative warehouse imagery

Our business

Warehousing requirements vary with the cargo and the schedule around it. The type of goods, packaging, quantity and expected storage period shape the brief. Bringing those details together at the start helps make the discussion specific and the proposed arrangement easier to assess.

Our perspective

A useful storage arrangement begins with a clear understanding of the cargo and the period it needs to remain in storage. Facility suitability, availability and access arrangements are important parts of the enquiry and the final agreed scope.

The capability behind the name.

01 Warehousing

Storage enquiries at Durban harbour

Techno Mix's core activity is warehousing. A complete enquiry describes the goods, the packaging and the volume to be stored. It should also set out any conditions that affect suitability, such as access needs or special requirements associated with the cargo.

- + Goods and packaging
 - + Quantity and storage footprint
 - + Any special storage conditions
-

02 Storage planning

Dates matter as much as volume

Arrival, storage and collection dates help define the proposed arrangement. For a phased movement, the brief should distinguish the total quantity from the quantity expected in storage at a particular time. Availability, receiving arrangements and collection requirements can then be discussed.

- + Expected arrival date
 - + Storage duration
 - + Collection or phased release schedule
-

03 Commercial scope

Agree the boundaries of the service

A warehousing quotation should make clear what is included and what requires a separate arrangement. Identify any handling, transport or other assistance needed as part of the enquiry. Those services and responsibilities must be confirmed expressly for the proposed storage arrangement.

- + Requested service inclusions
 - + Access and coordination needs
 - + Quotation and agreed responsibilities
-

A better brief. A clearer next step.

Tell us what you need to store, how much space it requires and for how long.

01 CARGO DESCRIPTION

What goods will be stored?

02 PACKAGING

How will the cargo arrive and be presented?

03 QUANTITY

Provide units, volume or other relevant measures.

04 STORAGE PERIOD

Include arrival and expected collection dates.

05 ACCESS

Describe receiving, collection or phased release needs.

06 SPECIAL REQUIREMENTS

Identify any conditions affecting storage suitability.

This guide helps structure the enquiry. Specifications, availability, pricing and the responsibilities of each party must be confirmed in the documents for the particular opportunity.

Four businesses. Distinct capabilities.

The Technobulk identity brings these businesses together while keeping the focus of each company clear.
